

Maria Paula Mendoza

Executive Summary

This report practically integrates the results of Sara Decarlini's Work Intelligence Assessment (LIA) and Personal Competences Analysis (PCA) to guide her vocational decision (choice of study program). The structure provides a clear presentation and an appropriate level of detail, with a practical focus designed to support students deciding whether to enter undergraduate programs or technical study tracks.

Martia Paula shows two exceptional cognitive markers: Detection of Characteristics = 96% (Exceptional) and Spatial Orientation / Visualization = Exceptional (78%). Her PCA shows high Influence, a service orientation, a strong concern for quality, and low Dominance. In simple terms: she has a keen eye for detail, can visualize in 2D/3D with ease, and relates very well to others — making her an ideal candidate for Architecture, Industrial Design, and programs that combine design with technical precision. She will benefit from guidance in decision- making and support for sustained cognitive load.

- 1 Translate LIA and PCA results into clear study recommendations.
- 2 Prioritize majors (Top-10) with cognitive behavioral justification.
- 3 Provide an exploration and decision plan (0–12 months) for a student.
- 4 Deliver an immediate operational plan (8 weeks) and tracking KPIs.
- 5 Map recommended universities and facilitate immediate application actions.

Influence / Technical precision

1. Operational meaning of the LIA subtests

Summary applied to the student

Detection of characteristics: Identifies errors, patterns and details; agile learning and precise execution — key for quality control and project review.

Reasoning: verbal fluency and logical analysis: Useful for argumentation, problem solving and presenting proposals.

Numerical speed and accuracy: Agility for practical calculations; sufficient for basic technical tasks.

Working memory: Retention and manipulation of information; for Sara it is adequate, and it is advisable to support it with tools.

Orientation / General visualization: Mental rotation, interpretation of plans and 3D prototyping — a differentiating ability for spatially oriented majors.

2. Integrated diagnosis (MIL+PCA)

Strengths and risks

A

Strengths: She quickly detects details and communicates very well with others.

B

Opportunities: Her reasoning and verbal skills are good and can grow even more.

C

Stable Areas: Her memory works well when information is clear and organized.

D

Risks: She may struggle to make firm decisions in difficult situations.

F

Needs: She benefits from checklists and step-by-step tasks to stay on track.

3. Prioritized top majors

LIA fit (detection + orientation) and PCA (influence, service, quality)

Perfect fit

1. **Architecture:** Spatial visualization + portfolio from the start; client interaction.
2. **Industrial Design / Product Design:** 3D prototyping, testing and product improvement.
3. **Civil Engineering** (*project design and supervision*): plan reading, site control and technical management.

Highly recommended

4. **Interior Architecture / Interior Design**
5. **Mechanical Engineering** (design and prototyping)
6. **Materials Engineering / Materials Science**

Complementary

- Naval Engineering / Naval Architecture
- UX/UI with physical prototyping / 3D product focus
- Technical Quality Control / Quality Engineering

4. Majors NOT recommended for Maria Paula

Programs that rely exclusively on repetitive routines with little visualization
(e.g., some pure branches of accounting without a technical component).

Programs that demand high dominance or aggressive sales without support
(due to low dominance).

5. Exploration and decision plan (0–12months)

Step-by-step for a student

6. Immediate operational plan: 8 weeks

Action checklist

7. Indicators and tracking KPIs

Portfolio: 2 completed pieces in **3 months**.

Deadlines: % of deliverables submitted on time, **target $\geq 90\%$ at 3 mo.**

Quality: reduction of errors found between revisions, **-20% in 3 mo.**

Training: **courses completed** (basic cad, intermediate bim) within **6 mo.**

Professional feedback: **2 reviews** with recommendations implemented.

8. Training and support recommendations

Technical: AutoCAD, SketchUp, Revit/basic BIM, SolidWorks or Rhino (depending on focus).

Practice: maker workshops / 3D printing / short internships.

Transversal: Project management fundamentals, technical communication and presentation skills.

Support: Monthly mentoring and coaching sessions focused on decisionmaking.

Comparative mapping of universities

Italy — Spain — Bogotá

Location		University	Program	Type	Requirements	Highlights
	MIL	Politecnico di Milano	Architecture; Product Design	Degree / Laurea (3–5 years)	Entrance exam / Portfolio	Top school; strong prototyping labs
	TOR	Politecnico di Torino	Architecture; Product Design	Laurea / Laurea Magistrale	Entrance exam / Portfolio	Technical focus with strong industry connections
	VEN	IUAV Università luav di Venezia	Architecture; Product Design	Degree / Master	Entrance exam / Portfolio	Highly practical programs
	ROM	Sapienza Università di Roma	Architecture; Product Design	Degree / 3+2 cycle	Entrance exam / Portfolio	Research orientation
	BCN	Universitat Politécnica de Catalunya	Architecture; Product Design	Degree (4–5 years)	Grade cutoff / Portfolio	Highly practical programs
	MAD	Politecnico di Milano	Architecture; Product Design	Degree / Master	Portfolio required	Academic prestige
	VLC	Politecnico di Torino	Architecture; Product Design	Degree	Portfolio required	Project-based learning
	BCN	IUAV Università luav di Venezia	Architecture; Product Design	Undergraduate (~10 semesters)	Institutional admission	Applied focus with ties to local studios

Recommendations for use: prioritize universities that require a portfolio and offer workshops/labs from year one (e.g., Polimi, IUAV, ETSAB, Uniandes, ELISAVA). Plan portfolio preparation 3–6 months in advance.

Conclusion and next steps

Conclusion:

Maria Paula displays high potential for majors combining spatial visualization and attention to detail, and she also has interpersonal skills that facilitate teamwork and project presentation. Prioritizing Architecture, Industrial Design and Civil Engineering is the main recommendation, with an exploration-and-portfolio plan as the immediate path.

Immediate operational next steps suggested:

1. Start the 8-week plan (enroll in a CAD course + portfolio project).
2. Select 4 target universities (2 aspirational, 2 safe) and verify admission calls/deadlines.
3. Request 2 portfolio reviews by professionals (mentors) during months 1–3.
4. Schedule decision-making coaching (3 sessions) to address low dominance.
